LEEASA VISION & MISSION

LEEASA was formed by like-minded organisations and individuals from the providers, manufacturers, maintenance, inspection, and examination and training sectors of this industry. LEEASA creates a responsible forum where the collective voice of its members can be formulated and used in all forums where opinions and professional or practical consultation is requested either by government or controlling bodies or the public at large.

LEEASA keeps its members informed of developments or technological improvements of which it becomes aware of in the industry and also disseminates by way of media and seminars training and other practical information to keep its members professional development current.

To achieve these ideals LEEASA actively lobbies to be represented on all forums where the government's regulators formulate policies. LEEASA members assist wherever possible.

LEEASA also attempts to be involved in the International Industry forums and Associations of peers where presently many informal and long term working relationships already exist.

LEEASA assist wherever possible to create the correct standards for both equipment and staff, who use and maintain them by endeavouring to have staff evaluated and registered by ECSA.

LEEASA is a non-profit association that wants to represent all members of the lifting industry at all levels and recognises that any task is performed by a team of independent members who all form part of it and are responsible for their actions.
